

# Plas-Fit HotGrip Simplicity & Performance

When performance counts:

## **HotGrip® Push-Fit Connectors for Demanding Hot Water Pipe Systems**

- Rugged by design: PPSU & PPSU/brass hybrid fittings
- Top-performance in extreme conditions: trouble-free, corrosion-free, long-service-life operation in potable systems up to 90°C
- Tool-less installation: quick, safe, secure
- Strict quality control: uncompromising standard compliance across Europe and throughout the world

The logo for Plas-Fit, featuring the word "PLAS-FIT" in a bold, sans-serif font. The "PLAS" part is in blue, and the "FIT" part is in orange. Below the text is a blue horizontal bar with a small white icon of a building or factory on the right side.

# Out-Of-The-Box Thinking To Serve You Better

Backed by 40 years of Plas-Fit innovation, our PPSU-based push-fit connectors overcome tough performance challenges with unique designs, advanced materials and uncompromising manufacturing methods. All of our products are created by a highly experienced engineering team, who work around the clock to support our customers, extend existing product lines and develop innovative new solutions in record time. All Plas-Fit Fittings products are manufactured from the finest materials according to uncompromising international standards and tested in certified laboratories. **We think differently and do more – and the proof is in the product.**

**HotGrip® 710 Series** – Our patented PPSU (polyphenylsulfone) push-fit connectors use time-tested, modular designs for tool-less, lead-free installations that save you time, money and effort. HotGrip® 710 products are workhorses that provide decades of safe, reliable, corrosion-free service in high-temperature potable water systems.

**HotGrip Hybrid® 720 Series** – The combination of PPSU and dezincification-resistant brass in our hybrid push-fit connectors maximizes installation speed and cost-efficiency in the brass environment. Working closely with an innovative brass fittings producer, we have developed a broad hybrid product base, and all are designs customizable to your particular needs.

**HotGrip® 730 Series** – HotGrip® 730 is the newest generation of our 710 Series product line. It delivers the same rugged performance in high-temperature potable systems – but at a lower cost due to a simpler overall design and the use of a patented new grip ring. We look forward to demonstrating this new technology and to building out its product base in response to customer demand.
